Abstract (en)

[origin: EP1215696A2] There is at least one keyboard pad (12) with one or more operating elements (16,28), protruding on an operating side (14) of the pad. On the contact side (44), away from the operating side, are located conductive contacts (46). The operating element is displaceable from its rest to a contact position by directional pressure. In the contact position two allocated contacts (50,52) of an electronic circuit (48) are connectable via the contacts, which comprise contact body of conductive elastically deforming material, separately allocated to respective operating element. An Independent claim is included for the mobile electronic appts.
