Abstract (en)

[origin: WO0125576A1] The invention relates to an intermediate gear (1) for coupling a window handle (4) with a connecting rod fitting (13) with an offset axis of rotation. To this end, two wheels (6, 8) are provided, these wheels being coupled by a transmission device (9). The areas of the peripheral outer surfaces of the wheels that are coupled with said transmission device (9) are offset from each other in the direction of the wheel axes so that they overlap each other in a projection in the direction of the wheel axes.
