Abstract (en)

[origin: WO0125588A1] The invention relates to a method and device for the construction of an underground pipe duct, particularly for civil engineering. An underground bore (3) is drilled from a starting shaft (2) into which a number of pipe sections (18) are driven to form the pipe duct. The pipe sections (18) are driven in by means of a frame construction (20) to which the pipe sections (18) are coupled in the drive direction individually or groupwise.
