Abstract (en)

[origin: DE19945558A1] According to a method for testing a component consisting of fiber-reinforced material, especially fiber-reinforced plastic, a component (2) consisting of a fiber-reinforced material is provided. Statically negligible or irrelevant areas of the component are then determined. At least one testing body (12) from the component (2) is then removed from at least one of the statically negligible or irrelevant areas of said component (2). The testing body (12) that has been removed is then tested for its technical material properties.
