Abstract (en)
[origin: DE19947085A1] The invention relates to a wire-guide element (6) which is shaped from wire, with an elongated foot (9) at one end that can be inserted into a hole of a base part (e.g. 1). Adjacent to the foot, the wire is bent into the shape of an eyelet (7), into which a locking element (8), for example a rod-shaped locking element, can be inserted. This allows the wire-guide elements to be assembled easily and to be fixed in their assembly position.
