Abstract (en)

[origin: EP1217302A1] The heater consists of a gas burner (40) with a heat reflector (30) supported by a tube (8) mounted on a base (2) with a cover (6) for a gas bottle. It has an upper support (12) on the top of the tube, equipped with radial arms (22) which extend upwards and have pivots (24) for the reflector. The burner is fixed to the inner concave surface of the reflector so that the two form a sub-assembly able to turn on the axis of the pivots (24) and held in the required position by a self-locking system. The reflector has outlets for the fumes from the burner.
