Abstract (en)
[origin: WO0113762A1] The invention relates to a table, comprising a table-top (10) and an underframe. The underframe has a horizontal bearing element (12), at least one support part (14) for supporting the table-top (10) and one or more table legs (18) which are connected to the support part. The table-top (10) is hinged to the underframe in such a way that it can pivot about a horizontal pivoting axis (11.1) and the support part (14) is connected to the bearing element (12) in such a way that it can be displaced between a working position and a stacking position by moving cross-wise to the pivoting axis (11.1), or that it can be pivoted about a vertical axis (14.4). Connecting elements (21, 22) are provided between the table-top (10) and the support part (14) which cause the table-top (10) and the table leg (18) that is connected to the support part (14) to pivot or rotate jointly.
