Abstract (en)  
[origin: WO0122859A2] The present invention relates to a textile cloth (1) for wiping floors. Said cloth consists of a flexible textile material (3) and can be detachably fixed to a tenting frame (2) of a manual cleaning device. The wiping cloth (1) at least partially protrudes over the holding surface of the tenting frame (2) with the edge areas thereof and is stiffened in said edge areas. The aim of the invention is to obtain better cleaning effects and a higher dimensional stability. To this end, flat reinforcement stripes (4) are mounted to the textile material (3) in a fixed manner and at least partially along the edge areas.
