Abstract (en)

[origin: WO0119387A1] The present invention provides a method of treating a condition or disease characterized by an excess of one or more androgens, the method comprising administering an effective amount of MIS protein or nucleic acid encoding MIS to a patient. The present invention also provides a method of decreasing the level of one or more androgens to a level below the normal level, the method comprising administering an effective amount of MIS protein or nucleic acid encoding MIS to a patient. The methods of the present invention are particularly well-suited for the treatment of prostatic cancer, polycystic ovarian disease, benign prostatic hypertrophy, and precocious puberty.
