Abstract (en)
[origin: WO0124863A1] The invention relates to a device which can be placed in the human hand and manually operated (100.....800). Said device is used in determining the time taken to fall asleep time and comprises a body (1) and an operating element (2). A longitudinal, cylindrical or prism-shaped recess (5) incorporated into said body (1) for receiving the actuating element (2). A pressure spring (4) is accommodated in said recess (4) and can be stressed by the actuating element (2). The pressure spring (4) is held by a magnetic element (30) which is disposed in the recess (5).
