Abstract (en)
[origin: WO0124933A1] The invention relates to a reaction substrate (20) comprised of a base part (10) and of a flexible compartment layer (21) which is made of a polymer material and which is provided with predetermined compartment structures (30) for forming sample compartments. According to the invention, the polymer material is a viscoelastic polymer composition (e.g. silicone rubber) which has an inherent adhesive property with regard to substrates made of glass, plastic, metal or of semiconductors. The invention also relates to a tool for producing the reaction substrate.
