Abstract (en)  
[origin: CA2380130A1] An adjustable magnetic jig (20) includes a first magnetic holder (22), and a second magnetic holder (26). A pivoting joint (30) connects the first (22) and second (26) magnetic holders, so that the angle A between the holders may be selectively adjusted. Pivoting joint (30) is also selectively lockable so that angle A can be fixedly maintained. Jig (20) is particularly useful in holding magnetic workpieces (500) in a desired physical relationship so that the two workpieces (500) can be welded together.
