Abstract (en)
[origin: WO0123152A1] An edge punching machine comprises a punching slot (38) into which a stack of material to be edge-punched may be located, and a punching device (80, 90) comprising a plurality of punch members (81, 91) moveable through the punching slot to punch holes in the stack. Location means (156, 126, 81) is provided to locate the edge of the stack and hence spacing between the edge of the stack and the array of punched holes. The location means comprises a plurality of support members (156, 126, 81) extending in the punching slot (38) to support the stack at spaced intervals, whereby any clippings which may enter the punching slot will drop between said members and will not affect the spacing in subsequent punching operations. Conveniently the machine comprises two punching devices (80, 90), each comprising a different plurality of punch members (81, 91) and the location means is conveniently provided by the punch members (81) of one of said punching devices (80).
