Abstract (en)

[origin: WO0108898A1] The invention concerns adhesive marking support capable of being posted, in particular those designed for taking down notes. The invention concerns a support (1) for visual or olfactory marking capable of being affixed on the human body, comprising an absorbent flexible material strip (2) capable of temporarily affixing a visual or olfactory message, coated with a skin-compatible self-adhesive gel film. Preferably, the strip consists of an elastic fabric, in particular a mixture of polyamide and elasthane fibre and the gel is a viscoelastic silicon gel, optionally covered with a protective film (4). The strip and the gel are advantageously washable and capable of absorbing an aromatic substance or a perfumed liquid.
