Abstract (en)

[origin: WO0125518A1] The invention relates to a device for clamping a lower screw thread to a spindle of a textile machine, in particular a ring spinning machine, whereby a spindle has a clamping ring (15) that is firmly connected to the spindle which is firmly connected below the mounted head and a clamp casing (20) which can be axially on the spindle between an open position (I) and a closed position (II). Said clamp casing (20) is held by at least one magnetic element (30) in either a closed position (II) defined by the clamping ring (15) or in an open position (I) defined by the flange (40).
