Abstract (en)

[origin: WO0118309A1] The invention relates to a method for the production of a liner comprising at least a top layer and a base layer, wherein a forming section is used, with at least two forming units to create a fibre web, said fibre web being conveyed through a press section and further to a drying section, said press section comprising a number of roll nips and at least one impermeable transfer belt with at least one smooth surface, wherein said transfer belt runs through the last nip in the press section and that the fibre web is conveyed through the last nip in the press section in such manner that its top layer is pressed against said smooth surface of the transfer belt.
