Abstract (en)
[origin: WO0127783A1] A system and methods for accessing summary or pre-selected items of Internet information using Internet appliances (20-25) is provided. Users access Internet information through an Internet appliance interface optimized for the network bandwidth and display capabilities (22) of the Internet appliance. The Internet information accessed is the information that is determined to be relevant and important to the user. The information is summarized for, and presented to, the user at one or more pre-determined levels of detail.
