Abstract (en)
In a puzzle game of fitting a plurality of puzzle pieces in a puzzle case (1) in a plurality of combinations, the puzzle case (1) and the puzzle pieces are so designed as to have a combinational shape of trapezoids having a top side the length of which is equal to that of both lateral sides thereof and a bottom side the length of which is two times that of the top and lateral sides and each puzzle piece is configured by joining together two smaller pieces of the aforesaid trapezoidal shape at positions where vertices of the trapezoids coincide or at positions where a vertex of one of the trapezoids coincides with the middle point of a bottom side of the other trapezoid. Such arrangement makes it possible to provide various puzzle piece combinations while preventing games from becoming too difficult to solve, and readily enjoyable entertainingness is not spoiled. <IMAGE>
