Abstract (en)

[origin: EP1219467A1] The flip-chart table has a paper block on the table surface (1), with its top edge clamped in a holder (5). There is a displacement device for the holder enabling the height of the holder to be adjusted, e.g. by means of rods (8, 9) which can be pushed out of a frame (2). This means that there is no need to alter the height of the table itself.
