Abstract (en)

[origin: EP1219556A1] The method for producing printed products comprises a conveyor belt (6) fitted with suction cups (12) which feeds sheets (3) from a digital printer at a higher speed than the feeder speed to a stacker (19) where they are released. They are then forwarded on as a stack by a second conveyor (7). An Independent claim is included for a machine for carrying out the method.
