Abstract (en)

[origin: EP1220050A2] A toner replenishing device of the present invention includes a casing for accommodating a toner. The casing is made up of a lower case formed with an opening for receiving the toner container, and an upper case for covering the opening of the lower case. A locking member locks the upper case closing the opening to the lower case. The locking member is configured to lose the function of locking the upper case to the lower case when unlocking the former from the latter. <IMAGE> <IMAGE>
