Abstract (en)
[origin: EP1220550A2] The communication system has a first data processor (21) connected to a workplace computer (6) which performs a data bank function. A second data processor (24) is connected to the first via telecommunications operators connectable to the workplace telephone (5). A control (26) produces a connection between at least two telecommunications operators, so that the controller is connected to the first data processor.
