Abstract (en)  
[origin: WO0146016A1] A system and method for providing a sequence of individualized custom doses (32) according to a temporal dosing schedule. The individualized doses are delivered in a package (34) or packages, with each individualized custom dose comprising a plurality of medications and/or supplements, and individually separable from the remaining doses within the sequence. For example, a system is described having a web based front end interface (16) within which the user (12) may establish a dosing schedule, select supplements and/or medications from a list of those available, elect which medications and/or supplements are to be included in each dose, and send the order to be processed. A manufacturing system is described for processing the order wherein a series of vehicles having individual collection areas traverse a series of bins and collect a sequence of pills with each collection area being loaded into a separate package or portion thereof. These individual doses are labelled with the identification of the individual for whom the doses were created and the time at which each dose is to be taken according to the selected schedule.
