Abstract (en)
[origin: DE19947516A1] The dispensing apparatus has a multiple compartment bulk goods container (2) and a vertical stirring mechanism provided with a drive (1). An intermediate part of the container is removable. The stirring mechanism is formed in several parts. At least that part of the stirring mechanism disposed in the intermediate part of the container is coupled in force fitting engagement with the driven part of the mechanism and can be laterally removed together with the removable part of the container. A coupling arm is also provided, with engagement teeth which engage with the stirring mechanism to couple the stirring mechanism parts together.
