Abstract (en)  
[origin: DE19948890A1] The invention relates to a device comprising a heat generating unit (1) having an elevated operating temperature in an operating phase and a cooling system (2, 10, 11, 12, 13) having a cooling medium which flows into or by the unit (1). The flow speed of the cooling medium in or to the unit (1) can be modulated with respect to size and/or direction.
