Abstract (en)

[origin: WO0127639A1] The present invention relates to a sensor (10) for detecting high-frequency oscillations of the voltage in a line (11). The sensor (10) is provided with a capacitor (15). The first connection of the capacitor can be connected to the line (11). According to the invention, a current transformer (18) and a socket (19) for removing a measured signal are allocated to the second connection of the capacitor. A sensor (10) is arranged in a space (13) between the line (11) and a screening (12).
