Abstract (en)
[origin: WO0028508A2] A device for marking a product, comprising: an input/output channel for accepting an inquiry and for answering with marking information stored in the device; means to securely attach the device to the marked product; a digital storage for storing the marking information; a controller for receiving an inquiry through the input/output channel. A method for marking a product comprising the steps of: A) manufacturing an electronic marking device including an input/output channel, means to securely attach the device to the marked product, digital storage means for storing the marking information and additional information, and controller means; B) attaching the marking device to a product to be marked; C) writing product marking information into the storage means.
[origin: WO0028508A2] A device for marking a product (26), comprising: an input/output channel (21) for accepting an inquiry and for answering with marking information stored in the device; means (23) for receiving an inquiry through the I/O channel. A method for marking a product comprising the steps of: A. Manufacturing an electronic marking device including an I/O channel, means to securely attach the device to the marked product, digital storage means for storing the marking information and additional information, and controller means; B. attaching the marking device to a product to be marked; C. writing product marking information into the storage means.
