Abstract (en)
[origin: WO0000001A2] The aim of the invention is to provide a means of binaurally operating hearing aids (1a, 1b) that can each be switched over in situ in at least two transmission modes from the respective microphone to the respective output transducer arrangement. To this end, the active transmission modes of the hearing aids (1a, 1b) are synchronised via a wireless connection (11, 15) between the hearing aids (1a, 1b).
