Abstract (en)
[origin: EP1221520A1] Door comprises a door leaf movable between an open position and a closed position, an adjustable locking element (40), and at least one locking arrangement (30) having a holding element (50). The holding element is moved from the holding position into the release position by a rotating movement about a tilting axis (52) running preferably parallel to the door leaf. An Independent claim is also included for a locking arrangement for the above door. Preferred Features: At least one locking element is adjustable between the locking position and the release position by rotation about an axis of rotation running preferably parallel to the tilting axis.
