Abstract (en)

[origin: EP1221689A2] Ultrasonic converter for a motor vehicle comprises a housing (12) with a base part (14) and a receiving opening at least partly closed by a cover (16). The cover is rotatably connected to the base part by a flexible material bridge in one piece. Preferred Features: The cover is molded on the base part on one side by a film hinge (18) and held in a closed position preferably by a snap-in connection (22). The base part and the cover are designed as semicylindrical shells made of plastic, preferably by an injection molding process.
