Abstract (en)

[origin: WO0129190A1] The invention relates to lymphocytes, having the property of recognizing cells of a patient in which the pericellular membrane expression of HSP or presentation of HSP epitopes has been induced and increased with respect to the normally occurring HSP expression level in the patient's body, and corresponding to an overexpression of HSP, particularly at a level of at least about 10 times the normally occurring level. These lymphocytes are used, for instance, as active substance in pharmaceutical compositions.
