Abstract (en)  
[origin: WO0129525A1] The inventive device comprises a housing (1) which is configured in the shape of a flat strip comprising an enclosure (6) on one side which projects outwards and contains a material (7) that changes its state or viscosity at a predetermined temperature. Said enclosure (6) opens onto the space inside the housing through a hole (8) which can be plugged with a tongue (9), this space inside the housing containing a strip (11) consisting of a porous material that is visible from the outside through holes made on the top surface (5) of the housing.
