Abstract (en)

[origin: WO0116847A2] A system, method, and article of manufacture are provided for organizing multiple dimensions of tax-related data for generating fact details to facilitate payment of taxes. First, a plurality of dimensions of tax-related data are provided along with a plurality of attributes for each of the dimensions. Next, a plurality of entries are received which are associated with the attributes of the dimensions. A plurality of fact details are then generated by aggregating the entries of a predetermined set of the attributes of the dimensions. Thereafter, the fact details are outputted.
