Abstract (en)

[origin: WO0129871A1] A cathode ray tube (10, 110, 210, 310, 410, 510) includes an electron gun (12, 112, 212, 312, 412, 512) directing electrons towards a faceplate (20, 120, 220, 320, 420, 520) having an electrode (22, 122, 222, 322, 422, 522) biased at screen potential. The electron beam is magnetically deflected to scan across the faceplate (20, 120, 220, 320, 420, 520) to impinge upon phosphors (23, 123, 223, 323, 423, 523) thereon to produce light depicting an image or information. A neck electrode (44, 144, 244, 344, 444, 544) near the tube neck is biased at or below screen potential and a second electrode (46, 146, 246, 346, 446, 546) between the neck electrode (44, 144, 244, 344, 444, 544) and the faceplate (20, 120, 220, 320, 420, 520) is biased at or above screen potential. As a result, the electrons are deflected over a greater total angle than is obtained from the magnetic deflection. A third electrode (48, 148, 248, 348, 448, 548) proximate the faceplate (20, 120, 220, 320, 420, 520) is biased at or below screen potential to direct electrons towards the faceplate (20, 120, 220, 320, 420, 520), thereby to increase the landing angle of the electrons thereon. A metal and ceramic support (360, 362, 364) includes a resistive voltage divider (366, 368) to which ones of the electrodes (344, 346, 348) connect.

[origin: WO0129871A1] A cathode ray tube (10, 110, 210, 310, 410, 510) includes an electron gun (12, 112, 212, 312, 412, 512) directing electrons towards a faceplate (20, 120, 220, 320, 420, 520) having an electrode (22, 122, 222, 322, 422, 522) biased at screen potential. The electron beam is magnetically deflected to scan across the faceplate (20, 120, 220, 320, 420, 520) to impinge upon phosphors (23, 123, 223, 323, 423, 523) thereon to produce light depicting an image or information. A neck electrode (44, 144, 244, 344, 444, 544) near the tube neck is biased at or below screen potential and a second electrode (46, 146, 246, 346, 446, 546) between the neck electrode (44, 144, 244, 344, 444, 544) and the faceplate (20, 120, 220, 320, 420, 520) is biased at or above screen potential. As a result, the electrons are deflected over a greater total angle than is obtained from the magnetic deflection. A third electrode (48, 148, 248, 348, 448, 548) proximate the faceplate (20, 120, 220, 320, 420, 520) is biased at or below screen potential to direct electrons towards the faceplate (20, 120, 220, 320, 420, 520), thereby to increase the landing angle of the electrons thereon. A metal and ceramic support (360, 362, 364) includes a resistive voltage divider (366, 368) to which ones of the electrodes (344, 346, 348) connect.
