Abstract (en)
[origin: EP1223242A2] A compensation mass element made out of concrete for a washing machine comprises a number of sleeves (4) for the introduction of fastening elements for the connection with the washing machine lye holder. The sleeves consist of steel and are welded with a peripheral concrete reinforcement. The weld connections are designed as welding points (10,11). The reinforcements are designed as round wire hoops (2,3). At least one wire hoop runs on the outside (9), relative to the center point of the wire hoop, of the sleeves and is connected with these. At least one second wire hoop runs on the inside, relative to the center point of the wire hoop, of the sleeves and is connected with these.
