Abstract (en)
[origin: EP1223288A2] One glass plate (3) extends over the other (2) at least on one side by a projection (5). A compound profile comprises a fixture accommodation profile (7) fitted on the projection and a heat insulation profile (8) connected with the fixture accommodation profile. The heat insulation profile forms a surface facing the distance holder, which extends to the face edge of the shorter glass plate (2). Between this surface and the distance holder and the face edge of the shorter glass plate a gap is formed for sealing and/or blocking.
