Abstract (en)
An assembly (10) for protecting a house interior from floodwater. The assembly comprises an open-ended frame (20) for attachment to walling on either side of and beneath a house doorway (50), the open-ended frame having groove means (22) extending around its inner periphery; and a panel (20) configured to be a snug fit within the open-ended frame, the panel having a peripheral edge which in use is slidably received in the groove means forming a seal wherever the panel engages the open-ended frame, in which the panel has a non-planar profile with a central part of the panel projecting on one surface of the panel proud of the peripheral edge and in which the non-planar profile of the panel is reversible. <IMAGE>
