Abstract (en)
[origin: EP1223299A2] Roller blind, especially an insect-protection roller blind, for covering a window or door opening comprises a cover, e.g. insect-protection fabric, wound/unwound on a winding shaft, and roller blind guides arranged at the side of the window/door opening and open toward the covering. For infinitely variable locking of the cover, at least one rotating lock (5) engaging in the roller blind guide is provided which is transferred against spring force from a blocking position into a release position. Preferred Features: The rotating lock has an anchor (10) and a leaf (11), preferably a two-armed leaf, rotating against it. Two rotating locks are attached opposite each other to the end of the cover.
