Abstract (en)

Resin frames (10) are provided in an apparatus body of an image formation apparatus. Each of the resin frames (10) is integrally formed with a plurality of gear shafts. A gear is mounted to each gear shaft. A resin frame (10) passes through the rotation shaft (20). Some of the rotation shafts include a clutch and clutch gear (12a) having an outer diameter larger than an outer diameter of the clutch (16). The clutch (16) and the clutch gear (12a) are rotatable. The clutch gear (12a) constitutes a gear train together with the gear and the like. The resin frame (10) is integrally formed with a standing-up piece (24) which is in parallel to the rotation shaft. The stand-up piece (24) is provided with an engaging section which engages the clutch (25) and prevents the clutch (16) from rotating. <IMAGE>
