Abstract (en)
[origin: FR2799642A1] The invention relates to a device for washing and bathing the eye, characterized in that it is embodied in the form of a dish (1) having a flexible edge (2) and being generally shaped in such a manner as to accommodate the contours of the eye resting upon the orbit. The inventive device comprises two openings on the part (3a) of the wall of the dish (1) which is placed next to the outer side of the eye in relation to the patient's nose. One (4) of said openings can be adapted on the end of the distribution cannula (6) of a pressurized receptacle (7) filled with ophthalmic solution which is used to wash and bathe the eye and the other opening (5) is located on the wall of the dish, being closer to the eye than the latter and used for the disposal of the ophthalmic solution when the eye is washed.
