Abstract (en)  
[origin: GB2355723A] A detergent composition which dispenses and dissolves well in aqueous solution and having good storage stability comprises an effervescence particle which releases gas on contact with water either due to a reaction which takes place with water or due to release of a gas on contact with water. The composition may contain a low density surfactant-containing detergent matrix component or includes a detergent matrix having eRH below 30 %. The detergent matrix comprises a detergent matrix component which is preferably a spray dried particle, and optional additional detergent ingredients.
