Abstract (en)

[origin: DE19941606A1] The invention relates to a method for determining potentially relevant DNA and/or nucleic acid sequences of a species of interest (species sequences). The aim of the invention is to create a method for determining DNA and/or nucleic acid sequences with which those DNA and/or nucleic acid sequences are specifically selected that have a potentially increased relevance, that is that can be examined with respect to certain functions, especially with regard to a potential relevance for a disease, with a considerably reduced amount of research required.
