Abstract (en)  
[origin: WO0118335A1] A bolt device for a door, window, hatch or the like (2), which device includes a mortised bolt frame (1), to which can be connected at least one, preferably two locking rods (3a, 3b), which are movable with an operating device (8, 31) from a free position to a locking position, in which they are supported to a frame (4), a sill (6) or the like. The locking rod (3a, 3b) is arranged to be coupled to the bolt frame (1) so that a coupling head (17) of the locking rod (3a, 3b) is movable relative to the bolt frame (1) in a transverse direction with regard to the direction of movement of the locking rod (3a, 3b). Hereby the distance of the locking rods from the surface of installation in each case can vary.
