Abstract (en)

[origin: WO0129713A2] A computerized system for designing and estimating an electrical and/or fluid-based network, whose particularity consists of the fact that it comprises : a) first computerized means for acquiring and managing data related to an electrical and/or fluid-based network. The first computerized means comprises one or more first configurable processing environments for processing said data and storing virtual data structures; b) second computerized means for processing data related to said electrical and/or fluid-based network. The second computerized means adopts processing procedures that are configured according to object-oriented processing models and that establish dependency links among said virtual data structures; c) third configurable computerized means for managing a user interface.
