Abstract (en)
[origin: WO0127888A1] A security system includes detectors (11, 12) which communicate by way of a main electrical distribution circuit (6) with a home control centre (2) or a community control centre. The local control centre communicates with a remote operations centre to confirm alarm conditions from environmental detectors. The system includes means to pre-register detectors in association with locational data and call-back communications numbers so that appropriate response to alarm conditions is made.
