Abstract (en)

[origin: WO0159745A1] The invention relates to a label (3) which can be inscribed using a laser beam and which, in addition to a macroscopic inscription (38), comprises a microscopic inscription (39). The microscopic inscription cannot be perceived by the naked eye, is difficult to imitate and is easily overlooked by counterfeiters. The microscopic inscription thus serves as an authenticity feature and constitutes a hurdle for the production of counterfeits.
