Abstract (en)
[origin: WO0133592A1] The invention relates to a switch, comprising a housing (10), a switch lever (18), mounted in the housing, which can be pivoted between an on-position and an off-position and a detachable fuse unit (40), which may be mounted in the housing (10). The invention is further characterised by a lock mechanism (58, 60), which senses the position of the fuse unit (40) and impedes the movement of the switch lever (18) into the on-position when the fuse unit (40) is not in the correct position.
