Abstract (en)
[origin: WO0131749A2] A connector (12) which is used to join two lines (17, 18) is provided with two clamping blocks (14, 15) for receiving and establishing contact with said lines (17, 18). A receiving area (31) is also provided on said connector (12). A temperature limiter (32) having at least two connecting limbs can be inserted into said receiving area and two connector elements protrude therein. The first respective end of said connector elements is connected to one of the two clamping blocks (14,15) and the second end thereof establishes a contact with an associated connecting limb of the inserted temperature limiter (32).
