Abstract (en)  
[origin: EP1225061A2] The basic body (1) of the clamping bar has two clamping-arms (2,3) in a V-shape and joined by a yoke (4). The ends of the arms facing away from the yoke (4) define a narrow clamping-gap. The flanks of the clamping-arms have each at least one lengthwise ridge (5) which, on the outside at least, are made of material with a higher coefficient of static friction than that of the basic body.
