Abstract (en)

[origin: EP1225142A2] The method for continuously winding a web (P) of tissue on to a drum (1) comprises feeding it over a support roller (4) before winding. The pressure in the nip between the support roller and drum is measured and is kept constant by regulating the pressure in a hydraulic cylinder (19) which moves the secondary arm (10). An Independent claim is included for a device for carrying out the method.
